Results of quantitative analysis to identify global systemically important banks 2019

Results of quantitative analysis to identify global systemically important banks as at 31 December 2019

At least once a year, regulators determine which banks can be classified as global systemically important banks by conducting a quantitative analysis at a consolidated level. In accordance with section 10f(2) of the German Banking Act (KWG), the analysis takes into account the following factors:

- Size of the Group
- Group's cross-border operations
- Group's interconnectedness with the financial system
- Substitutability of the services or financial infrastructure provided by the Group
- Complexity of the Group.

The quantitative analysis required by the Basel Committee on Banking Supervision (BCBS) to identify global systemically important banks is based on the Commission Implementing Regulation (EU) no. 1030/2014 dated 29 September 2014 laying down implementing technical standards with regard to the uniform formats and date for the disclosure of the values used to identify global systemically important institutions according to the Capital Requirements Regulation (CRR).

Landesbank Baden-Württemberg is not currently considered globally systemically important.

The indicators as at 31 December 2019 presented in the following table were calculated using the »Instructions for the end – 2019 G – SIB assessment exercise« published by the Basel Committee on Banking Supervision and dated 28 January 2020.
