

SFirm - COMFORT

# Hassle-free solutions for innovative financial management

With our SFirm COMFORT package you will receive all the functionalities of our BASIC version, to which we have added some attractive functionalities in order to make it even easier for you to work with SFirm.

## Overview of your benefits:

### **Time-controlled and repeated 'multi-account retrieval'**

Simultaneously create and manage repeated multi-account retrieval orders for all desired accounts. This will accelerate your work in SFirm considerably, particularly if you have a large number of accounts.

### **E-mail notifications**

You can be notified by e-mail to alert you of various events (e.g. error protocols). This means that you are always kept informed of important events, allowing you to respond immediately.

### **pdf printouts and e-mail dispatch**

Protocols, analysis sheets or account movements/account balances can be printed off, but they can also be stored as .pdf files and sent as e-mail. This provides you with the option to manage your output flexibly and securely.

### **Enhanced user protocol**

The enhanced protocols allow you to track all major events in a transparent manner, e.g. changes to or the creation or deletion of payment instructions. This offers transparent documentation at all times of which changes have been made within SFirm and by whom.

### **Graphic presentation of balances over time**

The graphic presentation of your balances permits you a rapid overview of all your account balances. This means that you can track the development of your liquidity over a period determined by yourself.

### **Signature folder (app)**

With the Signature folder on your smartphone/tablet, you can approve or reject EBICS payments, and get information about your company's pending payments.

You don't need to generate or initialize a new key: your existing electronic key from SFirm is easily and securely transferred.

We provide you with 3 license codes in the SFirm COMFORT package.
