In doing so, we calculate the probability that customers will meet their payment obligations in accordance with their contracts. The calculation can include factors such as level of income, spending, existing liabilities, occupation, employer, employment duration, payment behavior (e.g. account turnover and balances), experiences from previous business relationships, contractual repayment of previous loans, and information from credit agencies. Additional data, such as sector, annual performance, and assets, is used for corporate customers. The score and rating are both based on mathematically and statistically recognized and proven practices. The calculated score values and rating levels help us to reach a decision when selling a product and are fed into ongoing risk management.</li></ul>
